WHO WE ARE?

Our core specialization lies in the engineering of custom-made components tailored to meet the most exacting specifications and performance standards. Whether the need is for a bespoke component in a high-stakes motorsport scenario or an intricately specialized part for aerospace applications, our engineering team collaborates closely with clients to create products that demonstrate flawless performance under extreme conditions. Leveraging cutting-edge materials and advanced manufacturing techniques, our custom solutions are meticulously engineered for precision, meeting the unique requirements of each project with an exceptional level of accuracy and reliability.

At Supaero GmbH, our corporate philosophy is anchored in sustainability and ethically responsible decision-making. We are resolute in our belief that the integration of advanced technological solutions must be intrinsically linked with environmental stewardship and an uncompromising adherence to ethical conduct. As experts in hydraulic systems and fluid transfer technologies, we actively seek to minimize our ecological footprint by incorporating sustainable manufacturing practices, responsibly sourcing materials, and committing to circular economic principles wherever feasible.

Our mission is to ensure that each product we produce is not only a testament to superior performance but also a contribution to a more sustainable future. By setting a high standard, we aim to exemplify that innovation and sustainability can co-exist synergistically, ultimately enhancing the industries we serve.

OUR SPECIALITY.

With over 15 years of specialized experience in high-performance motorsport, including DTM, WRT, TCR, Formula 1, NASCAR, MotoGP, among others, as well as extensive involvement in the aerospace sector, Supaero GmbH stands as an authoritative leader in the domain of hydraulic systems and fluid transfer technology. Our technical proficiency encompasses a broad spectrum of applications across motorsport, original equipment manufacturing (OEM), aerospace, and industrial sectors. We deliver advanced solutions designed to meet the stringent demands of our global clientele. Our reputation is built upon successful collaborations with elite teams and manufacturers operating within some of the world's most competitive and challenging environments. Supaero GmbH maintains a diverse, resilient network of clients, suppliers, and partners on a global scale, ensuring a reliable supply chain characterized by quality, efficiency, and dependability.

Our unwavering dedication to quality is evidenced by our ISO 9001 certification, which underscores our commitment to operational excellence across all facets of our business—from design and development through production and customer service. This certification is a reflection of our rigorous adherence to quality control processes and our dedication to continuous improvement. Whether we are providing precision hydraulic components for motorsport, robust fluid systems for aerospace, or bespoke industrial solutions, Supaero GmbH delivers unmatched excellence throughout every stage of the product lifecycle. Our clients place their trust in us not only for our technical acumen but also for our innovative approach and the reliability of our products, which consistently surpass industry expectations. We understand that precision, durability, and consistent performance are indispensable in high-stakes environments, and it is our mission to deliver components that exceed these stringent demands.

WHY SUPAERO?

Partnering with Supaero GmbH means engaging with a company that embodies high-level performance, sustainability, and reliability. We provide comprehensive support throughout the entire product lifecycle—beginning with the initial consultation, extending through design and engineering, and continuing beyond delivery with ongoing maintenance and technical support. Our team is committed to delivering tailored, customer-specific solutions that align precisely with the needs and objectives of each project. We invite you to achieve your goals with the support of technology that is designed to excel in the most challenging environments, supported by a corporate ethos dedicated to making a constructive impact on both industry and the environment. Whether you operate within the motorsport, aerospace, OEM, or industrial sectors, Supaero GmbH is your steadfast partner for success, combining unparalleled technical expertise with an unwavering commitment to sustainability and ethical business practices.

THE NEW S-SERIES

Fluid applications

Fuel, Oil, Water, Methanol & Pneumatics

Aramid Fibre Braid

The aramid fibre is Tecnora, a higher specification fibre than Kevlar, with excellent temperature, tensile and abrasion resistant properties. For applications requiring minimum weight for maximum pressure reinforcement.

Reduced diffusion rates

S-Series Hose is much more resistant to diffusion of liquids or gases than other PTFE hose products, due to its highly compressed, non-porous PTFE matrix. S-Series Hose has been successfully tested to SAE J1737 for resistance to automotive fuel diffusion.

Antistatic PTFE Linings

When electrically resistive fluids like solvents and fuels, or multiphase mixtures are passed through natural PTFE hose at high flow rates, a static charge build up occurs on the inner wall of the PTFE liner.

This can discharge to the nearest conductor that creates a pin-hole in the PTFE liner resulting in a leak-path. Antistatic PTFE includes a small quantity of a special high purity carbon black, which ensures safe static charge dissipation in accordance with International Standards.

Aramid Braid: -40° to +180°C

Stainless Steel Braid: -73°C to +260°C

S7 Fittings

The S7 Series hose and fittings are crafted from high-quality single-piece aluminum, designed to deliver optimal performance in both high-performance motorsport and aerospace environments. These fittings offer exceptional lightweight characteristics while maintaining high pressure resistance, making them ideal for demanding applications.

The S7 fittings are available in configurations from 0° to 180°, including forged and tube bends, providing a wide range of options to suit different installation requirements.

They are fully compatible with the S7 Series hose, the lightest and most advanced hose available on the market today. The S7 Series is trusted by the most renowned motorsport teams and manufacturers, further demonstrating its quality and reliability.

Fitting Type:
crimp/swage

Applications:
Fuel, Oil, Water, Methanol & Pneumatics

Compatible Hose:
S700 / S710 / S740 / S750

Material:
A = Aluminium

Alternative **Threads, Materials, Dimensions** and **Colors** are available upon request. Please **contact us** for more information.

S7 Fittings

The performance testing results stated in the above table have been carried out at ambient temperature, in a controlled laboratory environment, using water as the media. We recommend that the customer carries out stringent application performance testing on the hose, using the actual working conditions over a set period of time to validate the hose.

910 & 811 SERIES

Fluid applications

Fuel, Oil, Water, Methanol & Pneumatics

Reduced diffusion rates carbon impregnated, anti-static PTFE liner.

Braid

The aramid fibre is Tecnora, a higher specification fibre than Kevlar, with excellent temperature, tensile and abrasion resistant properties

-40°C to +180°C

Stainless-steel braid for maximum strength and durability.

-73°C to +260°C

S4 fittings

The Supaero S4 series fittings offer durable, lightweight construction designed for high-performance applications. Featuring precision-machined aluminum.

These fittings provide reliable connections for flexible hoses, suitable for both crimp and swage applications. They are fully compatible with the 910 hose and are available in various configurations to meet diverse system requirements.

Fitting Type:
crimp/swage

Fluid Applications:
Fuel, Oil, Water, Methanol & Pneumatics

Compatible Hose:
910 / 811

Material:
A = Aluminium

S4 fittings

The Supaero S4 series fittings offer durable, lightweight construction designed for high-performance applications. Featuring precision-machined aluminum.

These fittings provide reliable connections for flexible hoses, suitable for both crimp and swage applications. They are fully compatible with the 910 hose and are available in various configurations to meet diverse system requirements.

Fitting Type:
crimp/swage

Fluid Applications:
Fuel, Oil, Water, Methanol & Pneumatics

Compatible Hose:
910 / 811

Material:
A = Aluminium

Alternative **Threads, Materials, Dimensions** and **Colors** are available upon request. Please **contact us** for more information.

Adel Wiggins

Adel Wiggins provides high-quality quick-release couplings for connecting hard tubes to flexible hoses, commonly used in aerospace, motorsport, marine, and industrial applications.

Their couplings are lightweight, easy to use, and meet strict industry standards, ensuring reliability in demanding environments.

Benefits:

- Compatible with S7 FL and S7 PG and S4 FL + PG fittings for added versatility
- Quick and reliable coupling/decoupling
- Custom fittings available (AN-08 to AN-64)
- Lightweight high durability

Adel Wiggins Coupling Systems

Quick Coupling Solutions for High Demands

Adel Wiggins offers high-quality quick-release couplings for connecting hard tubes to flexible hoses (0.5" to 4" diameter). Ideal for aerospace, motorsport, marine, and industrial use, these connectors are easy to operate single-handedly and feature locking latch designs, eliminating the need for safety wire.

Features:

- **Material:** Aluminum
- **Operating Pressure:** 125 psi / 8.6 bar
- **Suitable Applications:** Low to medium pressure (water, oil, air)
- **Flexibility:** Angular misalignment up to $\pm 4^\circ$ and axial movement up to 6.35 mm
- **Standards:** Meets AS1650 and MIL-C-22263

AN Adaptors

Our range of AN adaptors offers versatility and reliability for demanding applications. Available in a variety of thread combinations, these adaptors are designed to fit seamlessly into your hydraulic systems, providing secure and leak-free connections.

The majority of our adaptors are made from high-quality anodized aluminum, ensuring lightweight strength and resistance to corrosion. We also offer adaptors in stainless steel, titanium, or zinc-plated steel for those requiring extra durability or specialized applications. Standard anodizing comes in a distinctive blue, but custom colors are available upon request to suit your needs.

AN Adaptors

Our range of AN adaptors offers versatility and reliability for demanding applications. Available in a variety of thread combinations, these adaptors are designed to fit seamlessly into your hydraulic systems, providing secure and leak-free connections.

The majority of our adaptors are made from high-quality anodized aluminum, ensuring lightweight strength and resistance to corrosion. We also offer adaptors in stainless steel, titanium, or zinc-plated steel for those requiring extra durability or specialized applications. Standard anodizing comes in a distinctive blue, but custom colors are available upon request to suit your needs.

CPL Coupler

Our CPL couplers are designed to provide fast, efficient, and reliable connections for hydraulic systems. These couplers are ideal for applications where frequent connecting and disconnecting of fluid lines is required, ensuring minimal fluid loss and maximum efficiency.

Made from high-grade anodized aluminum, they offer a lightweight yet robust solution, with additional options available in stainless steel and titanium for increased durability and specialized use cases. Standard anodizing for the couplers is blue, but custom color options are available to match specific requirements or aesthetic preferences.

Special Adaptors

Our Special Adaptors are crafted from high-quality anodized aluminum, offering exceptional versatility across a wide range of applications. Designed for use in demanding environments, these adaptors ensure reliable performance and seamless integration with various hydraulic and pneumatic systems.

With their lightweight construction and corrosion-resistant properties, Special Adaptors are ideal for both standard and custom use cases. Anodizing is available in our standard blue, but we also offer custom colors upon request to meet specific project needs or aesthetic preferences.

Alternative **Threads, Materials, Dimensions** and **Colors** are available upon request. Please **contact us** for more information.

AN Adaptors

Our range of AN adaptors offers versatility and reliability for demanding applications. Available in a variety of thread combinations, these adaptors are designed to fit seamlessly into your hydraulic systems, providing secure and leak-free connections.

The majority of our adaptors are made from high-quality anodized aluminum, ensuring lightweight strength and resistance to corrosion. We also offer adaptors in stainless steel, titanium, or zinc-plated steel for those requiring extra durability or specialized applications. Standard anodizing comes in a distinctive blue, but custom colors are available upon request to suit your needs.

CPL Coupler

Our CPL couplers are designed to provide fast, efficient, and reliable connections for hydraulic systems. These couplers are ideal for applications where frequent connecting and disconnecting of fluid lines is required, ensuring minimal fluid loss and maximum efficiency.

Made from high-grade anodized aluminum, they offer a lightweight yet robust solution, with additional options available in stainless steel and titanium for increased durability and specialized use cases. Standard anodizing for the couplers is blue, but custom color options are available to match specific requirements or aesthetic preferences.

Special Adaptors

Our Special Adaptors are crafted from high-quality anodized aluminum, offering exceptional versatility across a wide range of applications. Designed for use in demanding environments, these adaptors ensure reliable performance and seamless integration with various hydraulic and pneumatic systems.

With their lightweight construction and corrosion-resistant properties, Special Adaptors are ideal for both standard and custom use cases. Anodizing is available in our standard blue, but we also offer custom colors upon request to meet specific project needs or aesthetic preferences.

306 fittings

306 adapters are male-to-male adapters featuring JIC/UNF threads on one side and metric threads on the other. These adapters are designed to provide a reliable and secure connection between different thread standards, making them ideal for hybrid systems that combine metric and imperial components.

Constructed from high-quality anodized aluminum, 306 adapters offer both strength and corrosion resistance, ensuring dependable performance across a variety of demanding applications.

306 fittings

306 adapters are male-to-male adapters featuring JIC/ UNF threads on one side and metric threads on the other. These adapters are designed to provide a reliable and secure connection between different thread standards, making them ideal for hybrid systems that combine metric and imperial components.

Constructed from high-quality anodized aluminum, 306 adapters offer both strength and corrosion resistance, ensuring dependable performance across a variety of demanding applications.

Banjo Fittings

Banjo bolts and banjos are key components used together to enable efficient fluid transfer in hydraulic systems. Banjo bolts are hollow bolts designed to work with banjo fittings, allowing fluid to flow through the bolt. When paired with sealing washers, they create a secure, leak-free connection that is ideal for tight spaces or applications requiring pivoting connections.

Made from high-quality materials, these components are engineered to provide dependable performance in demanding hydraulic and pneumatic environments.

BRAKE SYSTEM CRIMP & REUSABLE

600-03 Hose Leading Page

The 600-03 hose is part of our high-performance 600 Series, specially designed for brake and clutch applications. This hose features a PTFE (Polytetrafluoroethylene) liner wrapped in a stainless-steel braid, providing exceptional durability and resistance to high pressures and temperatures. The stainless-steel braid can be optionally covered with an abrasion-resistant layer that is easy to wipe clean, adding further protection to extend the hose's service life.

Features:

- Material: PTFE inner liner with stainless-steel braid.
- Temperature Range: Designed to withstand a wide range of temperatures, from typical operating temperatures up to extreme heat conditions (up to 260°C).
- Durability: Resistant to high pressure and temperature, ensuring reliable performance for demanding brake and clutch applications.
- Customization: Available with different protective coverings and in multiple color options, such as clear, black, gold, red, vintage, and more, to suit various aesthetic or operational requirements.

Brake/Clutch

Our brake and clutch fittings and adapters are available in both crimp and reusable versions, offering flexibility for different hydraulic system setups.

These components are specifically designed for brake and clutch applications, ensuring optimal fluid transfer and system reliability. Made from high-quality anodized aluminum, they are lightweight, durable, and corrosion-resistant, making them ideal for use in both automotive and motorsport environments.

Crimp fittings provide a permanent, secure connection, while reusable fittings offer ease of maintenance and adaptability. Both options ensure superior performance under the high pressures typically encountered in braking and clutch systems.

Fitting Type:
crimp/reusable

Applications:
Brake, Clutch, Hydraulics

Compatible Hose:

236 REUSABLE SYSTEM

Supaero 200 series hoses, equipped with rubber linings, seamlessly complement

Supaero 236 cutter style fittings:

They are offered in bore sizes ranging from -04 to -16. The 200 series hose is distinguished by its reinforced chlorinated Polyethylene (CPE) synthetic rubber liner, encased in a double stainless steel external braid, enhancing its resistance to abrasion.

Features:

- Smooth bore design
- Integral stainless steel braid for structural integrity
- Rubber lining ensures durability
- Options available for fibre or stainless steel braided configurations

Benefits:

- Seamless flow
- Burst pressure capacity of up to 1000 psi / 69 bar (200-04)
- Temperature resistance ranging from -40°C to +150°C
- Bend radius capability up to 50mm (200-04)

Temperature Range:

-50°C to 150°C / -58°F to 302°F for 200

236 fittings

The 236 Reusable System includes high-quality reusable fittings for use with stainless steel or nylon external braided rubber hoses. These fittings are designed to provide a secure, leak-free connection and are ideal for applications that require frequent maintenance or flexibility in system design. The 200 Series rubber-lined hoses are compatible with 236 cutter-style fittings, making them perfect for 'push fit' applications. Available in bore sizes -04 to -16, these hoses are highly adaptable and efficient.

The 200 Series hose features a reinforced chlorinated Polyethylene (CPE) synthetic rubber liner, wrapped in a double stainless steel external braid for additional resistance to abrasion. The 210 Series hose includes a CPE synthetic rubber liner with a stainless steel internal braid and a lightweight nylon external braid, offering a lighter and more flexible solution where the abrasion resistance of the 200 Series is not required.

This system is not suitable for 'in cockpit' use.

Fitting Type:
reusable

Applications:
Fluid, Oil, Coolant, Methanol, Water

Compatible Hose:
200, 210

Material:
Stainless Steel

Alternative **Threads, Materials, Dimensions** and **Colors** are available upon request. Please **contact us** for more information.

536 SERIES

The 536 Series hose and fittings are designed for low-pressure 'push fit' applications. The Supaero 536 Series is a textile-reinforced rubber hose featuring an abrasion-resistant synthetic rubber cover, composed of Nitrile and PVC. This series is ideal for low-pressure oil breather applications where the stainless steel abrasion protection of the 200 Series is not required.

The 536 hose **is not for 'in cockpit' use** and is **not recommended for vacuum systems**. It is compatible with 536 push fit fittings and can be safely used with fuel, making it perfect for low-pressure push fit applications.

This hose is ideal for low-pressure push fit applications and is well-suited for environments where flexibility and ease of installation are important, but high-pressure resistance is not required.

Benefits:

- **Uninterrupted Flow:** Smooth bore design ensures efficient fluid transfer.
- **Burst Pressure:** Up to 1000 PSI / 69 BAR.
- **Temperature Resistance:** Withstands temperatures from -40°C to 100°C.
- **Tight Bend Radius:** Bend radius down to 50mm, suitable for flexible installation in various systems.

Features:

- **Smooth Bore:** Allows for uninterrupted fluid flow.
- **Textile Reinforced:** Provides structural integrity for low-pressure applications.
- **Rubber Lined:** Ensures flexibility and durability in hydraulic systems.
- **Synthetic Rubber Covering:** Resistant to abrasion, made of Nitrile and PVC.

Fire Sleeves

The S900 Fire Sleeve is a silicone-coated fiberglass braided sleeve, designed to protect wires, cables, and hoses from high ambient temperatures. Manufactured from E glass fiber yarn braided into a sleeve and coated with high-quality silicone rubber, this fire sleeve provides continuous protection at an operating temperature of 260°C and can withstand molten metal splash at temperatures of up to 1200°C.

The S900 Fire Sleeve is available in a range of colors including red, orange, silver, black, blue, pink, yellow, and purple, making it suitable for various applications in motorsport, aerospace, and other high-temperature environments.

The S900 Fire Sleeve is an ideal solution for applications requiring heat protection, particularly in aerospace and motorsport, where resistance to high temperatures and durability are paramount.

Technical Properties:

- **Base Fiberglass Substrate:** E Glass.
- **Specific Gravity:** 2.54-2.69.
- **Tensile Strength:** 450,000-500,000 psi.
- **Breaking Elongation:** 4.81%.
- **Elastic Recovery:** 100%.
- **Effect of Heat:** Retains 75% tensile strength at 343°C; softens at 732-877°C; melts at 1121-1182°C.
- **Fluid Resistance:** Resistant to phosphate ester hydraulic fluids, MIL-H-5606 hydraulic fluid, MIL-T-5624 jet fuel, MIL-L-6082 lubricating oil, MIL-L-7808 lubricating oil, MIL-L-23699 lubricating oil, MIL-H-83282 hydraulic fluid.

Features:

- **Material:** Silicone-coated E glass fiber braided sleeve.
- **Temperature Resistance:** Continuous protection at 260°C; withstands molten metal splash at 1200°C.
- **Color Options:** Red, orange, silver, black, blue, pink, yellow, purple.
- **Wall Thickness:** 4 mm ± 0.5 mm.

Aluminium Quick Disconnect Couplings

Manufactured from lightweight **6061-T6 aluminium**, these quick disconnect fittings combine low weight with high mechanical performance. The fittings are anodised for enhanced surface protection and are available for **brake, fuel and oil applications**, depending on the selected configuration.

The -3AN and -4AN versions are tested up to **15,000 psi**, while maximum operating pressure varies by size and configuration.

Their compact, tool-free connection makes them particularly suitable for motorsport and other applications requiring rapid removal of components and fluid lines.

Supaero Quick Disconnect / Dry Break Fittings

Supaero quick disconnect fittings, also known as **dry break fittings**, enable rapid removal and reconnection of fluid lines with minimal fluid loss. They are designed for applications where fast and reliable servicing is essential, including **brake, fuel and oil systems**. The fittings connect by hand while their leak-free construction supports clean and efficient maintenance of high-performance fluid systems.

- O-Ring:
- FKM: for most fuel and oil applications
- FVMQ: Jet-Fuel / Kerosene
- EPDM: for brake fluid

21. QUICK DISCONNECT COUPLINGS

Alternative **Threads, Materials, Dimensions** and **Colors** are available upon request. Please **contact us** for more information.

Supaero Quick Disconnect / Dry Break Fittings

Supaero quick disconnect fittings, also known as **dry break fittings**, enable rapid removal and reconnection of fluid lines with minimal fluid loss. They are designed for applications where fast and reliable servicing is essential, including **brake, fuel and oil systems**. The fittings connect by hand while their leak-free construction supports clean and efficient maintenance of high-performance fluid systems.

O-Ring:

FKM: for most fuel and oil applications

FVMQ: Jet-Fuel / Kerosene

EPDM: for brake fluid

Titanium Quick Disconnect Couplings

For applications where **maximum weight reduction and compact packaging** are critical, the titanium range provides an advanced alternative to stainless steel quick disconnect fittings. Manufactured with a titanium body, these fittings offer approximately **50% weight reduction compared with equivalent stainless steel versions**.

Titanium variants are available for **fuel and brake applications** and can also be supplied with a smaller body design for highly space-constrained installations. Their dry-break functionality enables fast, clean and reliable line disconnection without significant fluid loss.

This image shows a full page of blank graph paper. The grid consists of small, equal-sized squares formed by thin gray lines. There are 20 columns and 20 rows of squares, creating a total area of 400 square units. The background is white, and the grid lines are evenly spaced both horizontally and vertically.

This image shows a full page of blank graph paper. The grid consists of small, uniform squares formed by thin, light gray lines. There are no margins, text, or other markings on the page.
